

Curvas 2D y 3D

Dr. Rogerio

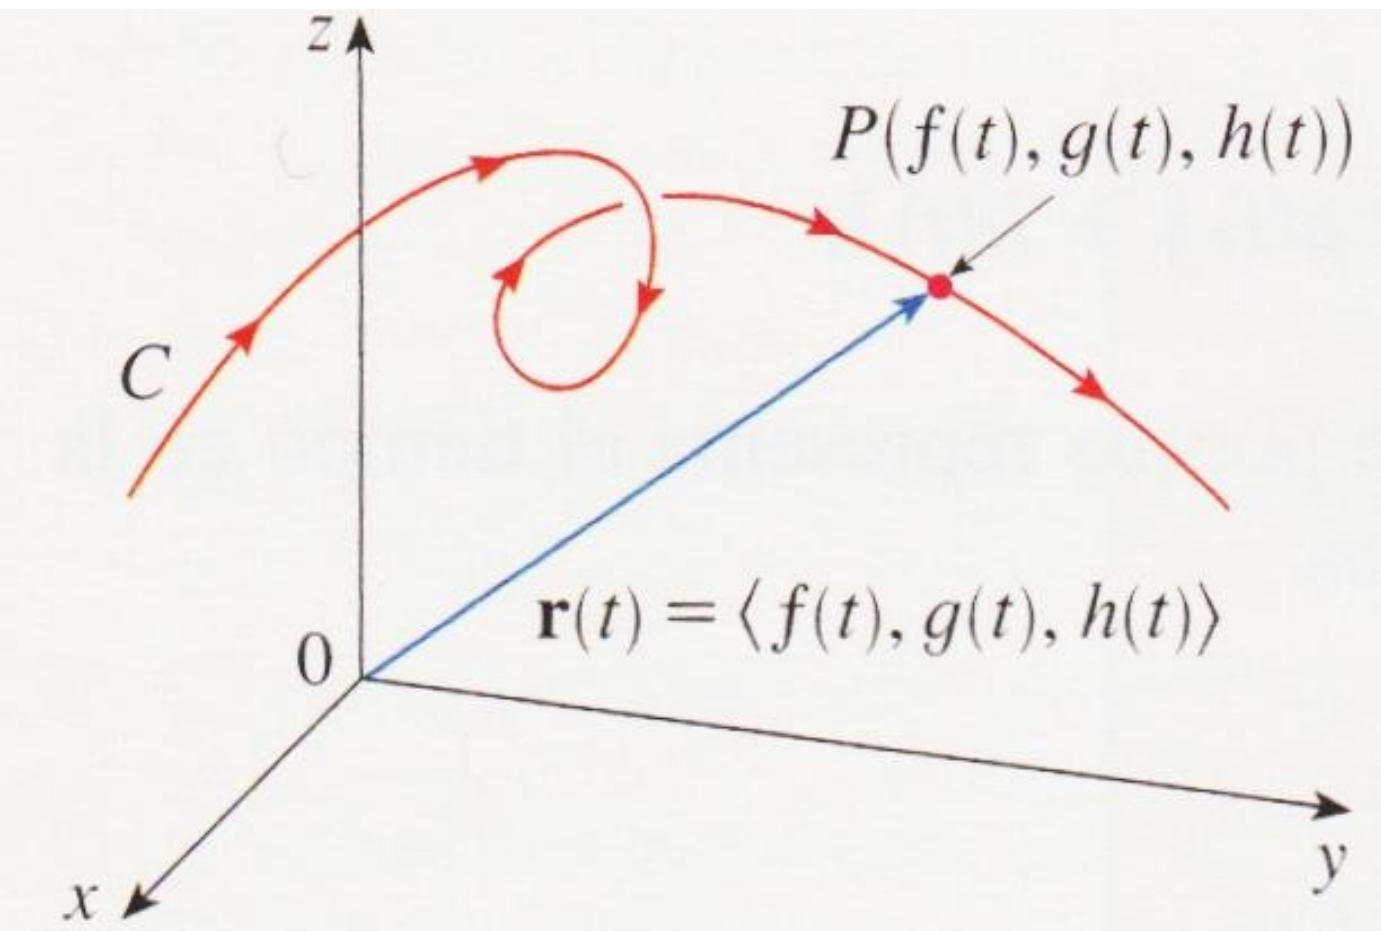

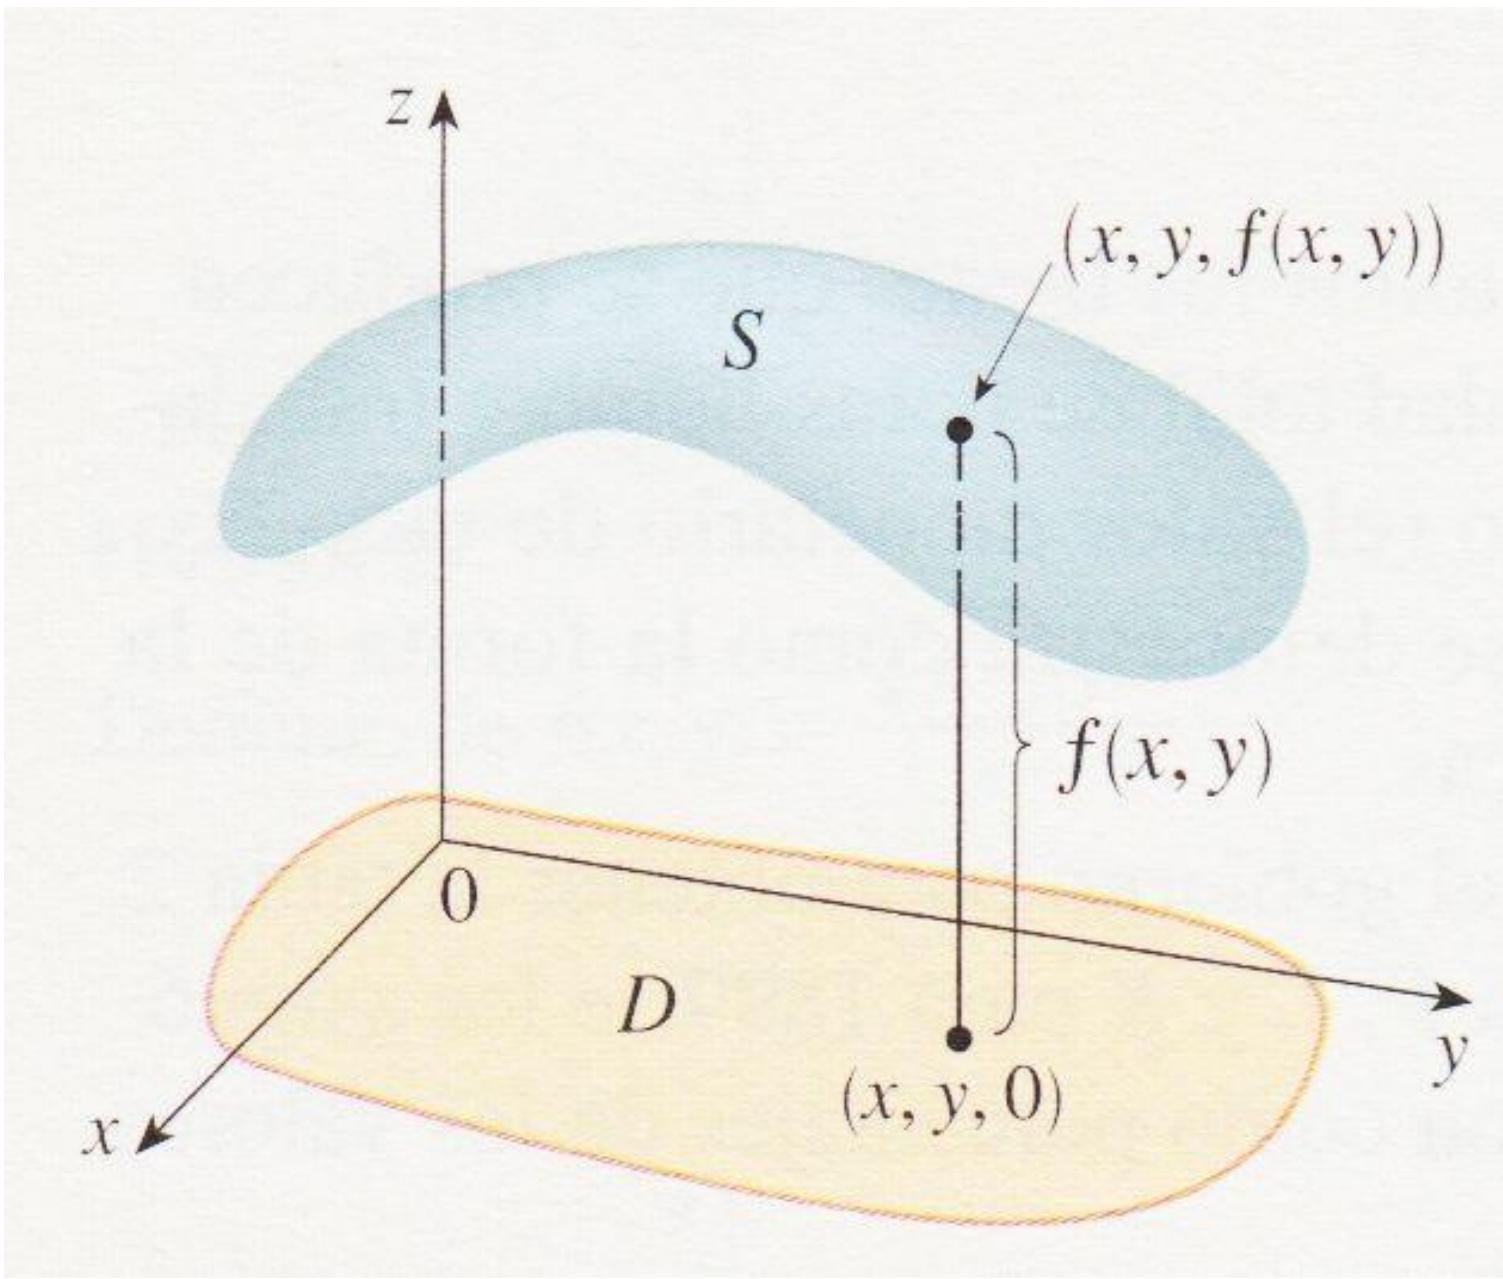

FIGURA I

La punta de un vector $\mathbf{r}(t)$ de posición que se desplaza traza a *C*

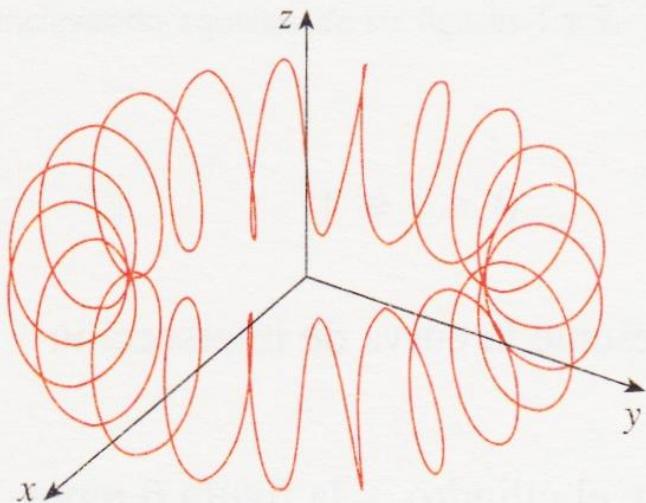

FIGURA 7 Una espiral toroidal

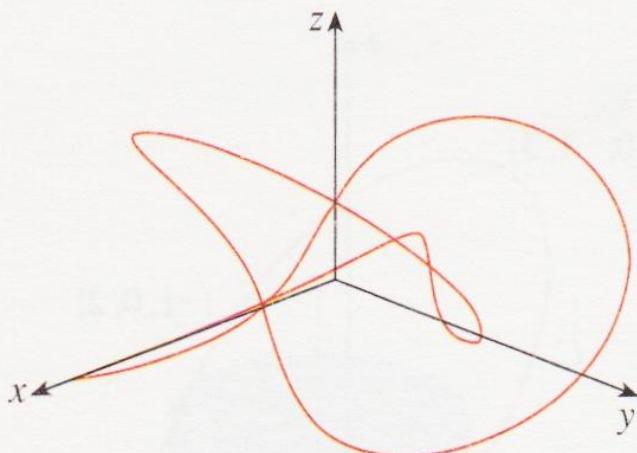

FIGURA 8 Un nudo de trébol

$$x = (4 + \sin 20t) \cos t$$

$$y = (4 + \sin 20t) \sin t$$

$$z = \cos 20t$$

$$x = (2 + \cos 1.5t) \cos t$$

$$y = (2 + \cos 1.5t) \sin t$$

$$z = \sin 1.5t$$

$$x = \cos 4t, y = t, z = \sin 4t$$

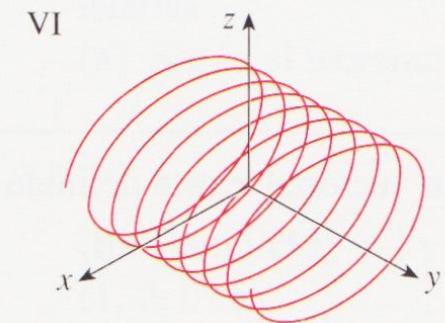

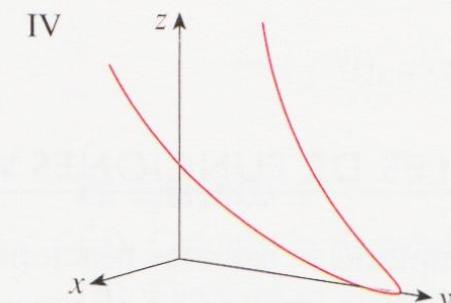

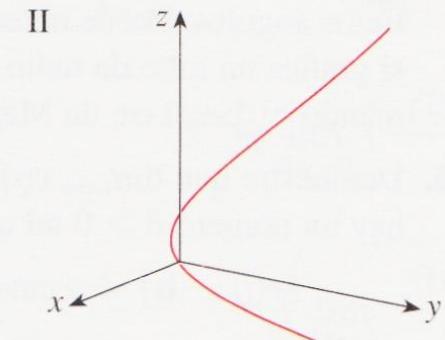

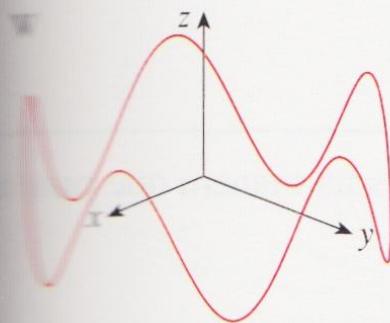

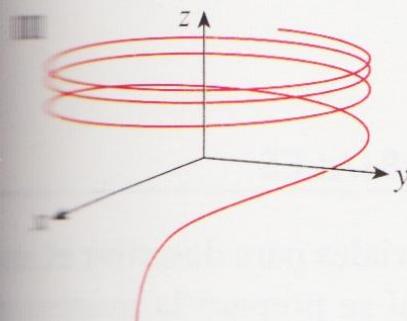

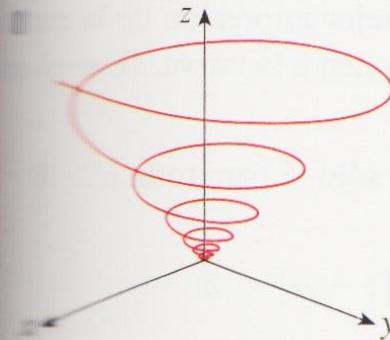

$$x = t, y = t^2, z = e^{-t}$$

III $x = t, y = 1/(1 + t^2), z = t^2$

IV $x = e^{-t} \cos 10t, y = e^{-t} \sin 10t, z = e^{-t}$

V $x = \cos t, y = \sin t, z = \sin 5t$

VI $x = \cos t, y = \sin t, z = \ln t$

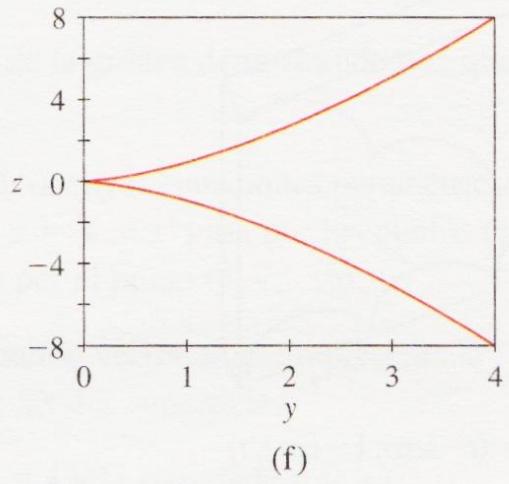

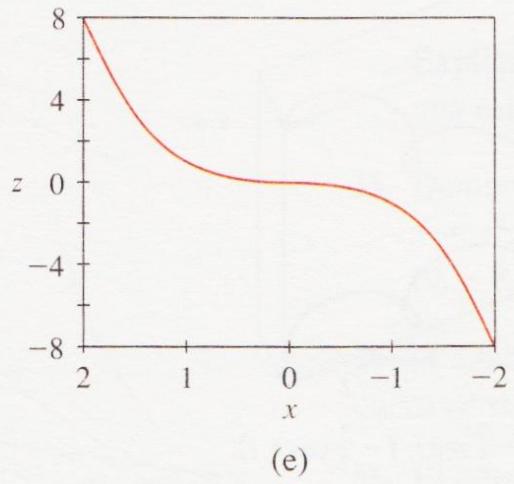

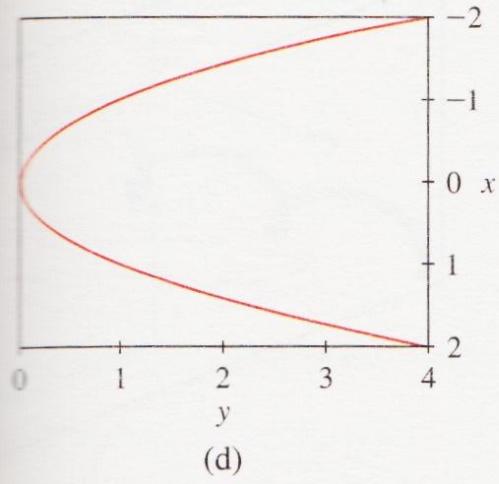

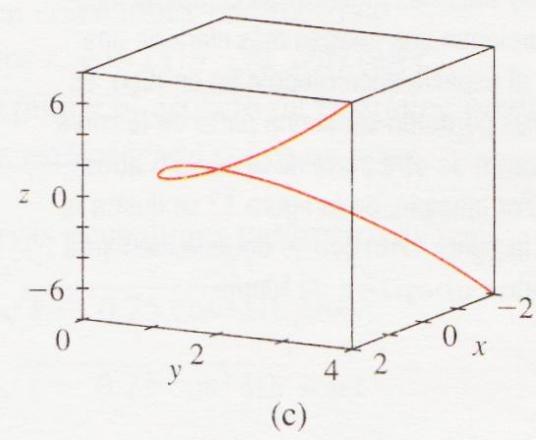

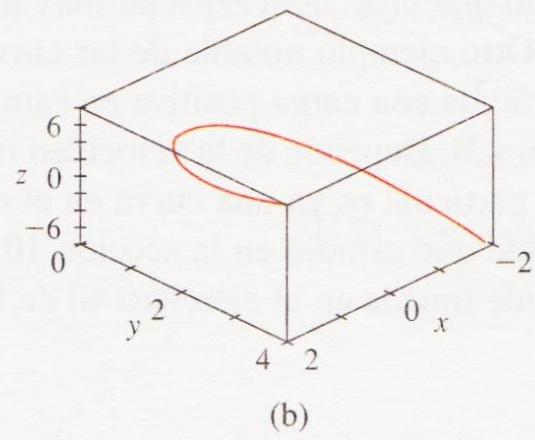

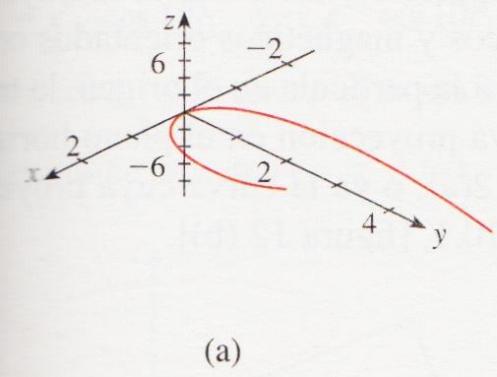

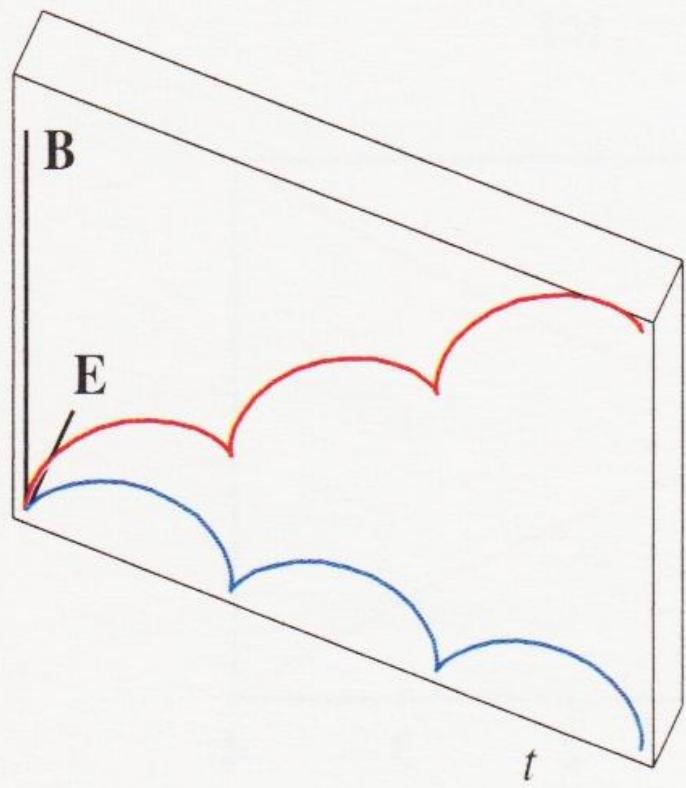

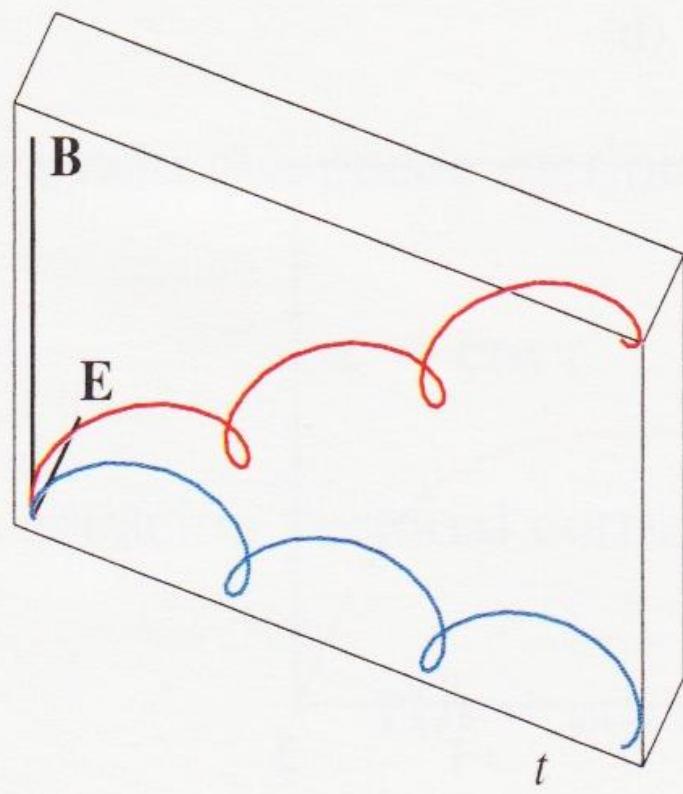

FIGURA 9 Vistas de la cúbica alabeada

$$\mathbf{r}(t) = (t, t^2, t^3)$$

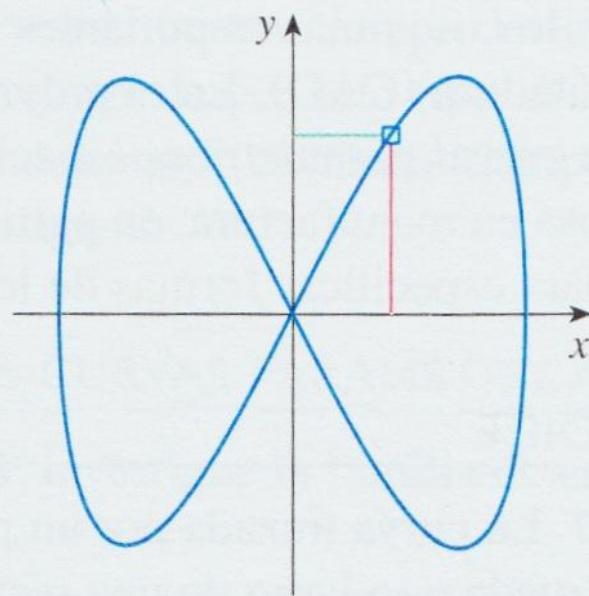

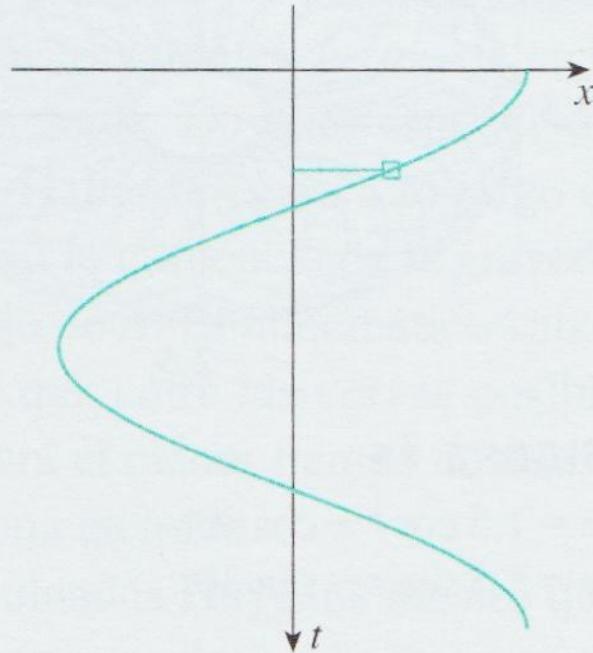

(a) $\mathbf{r}(t) = \langle t - \text{sen } t, 1 - \cos t, t \rangle$

(b) $\mathbf{r}(t) = \left\langle t - \frac{3}{2} \text{sen } t, 1 - \frac{3}{2} \cos t, t \right\rangle$

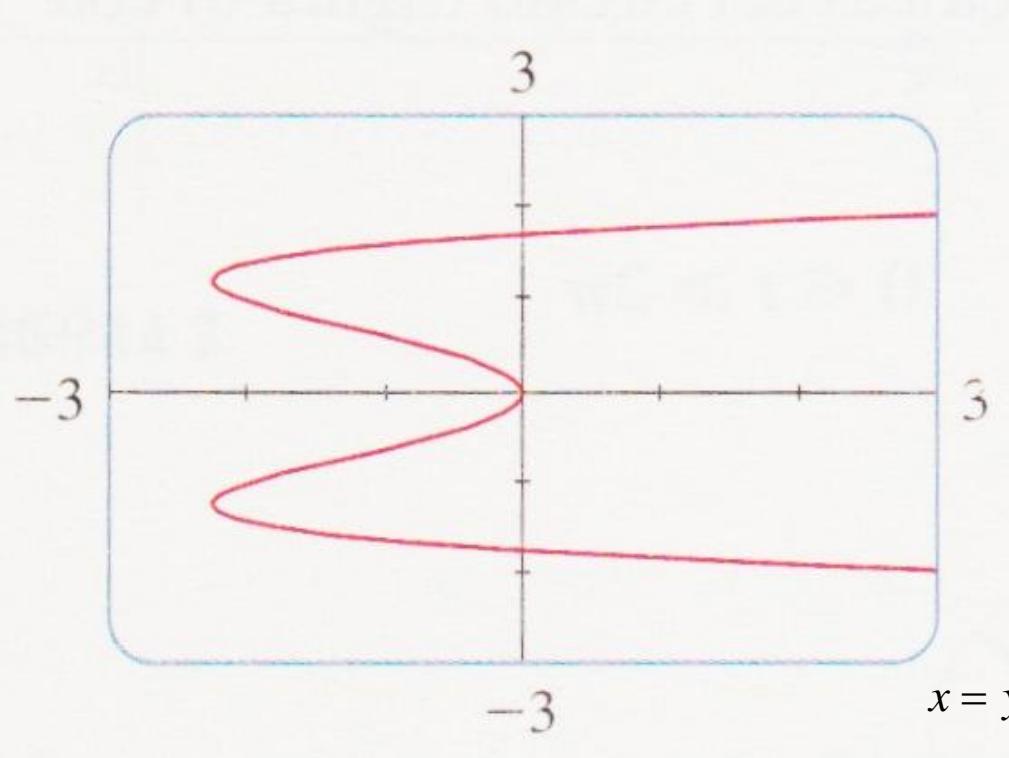

$$x = \cos t$$

8

$$x = \cos t \quad y = \sin 2t$$

$$y = \sin 2t$$

$$x = y^4 \pm 3y^2$$

como función habrá q dividirla en cuatro ecuaciones.

Paremétricamente:

Sea

$$y = t$$

$$x = t^4 \pm 3t^2$$

Normalmente haga

$$y = t$$

$$x = g(t)$$

recuerde

$$y = f(x)$$

Una función es

$$f : A \rightarrow B$$

x

$$f(x)$$

$$y = f(x)$$

$$f^{-1}(x) \qquad \qquad \text{función inversa}$$

$$x = f(y)$$

o también podemos hacer la función implícita

$$f(x, y) = 0$$

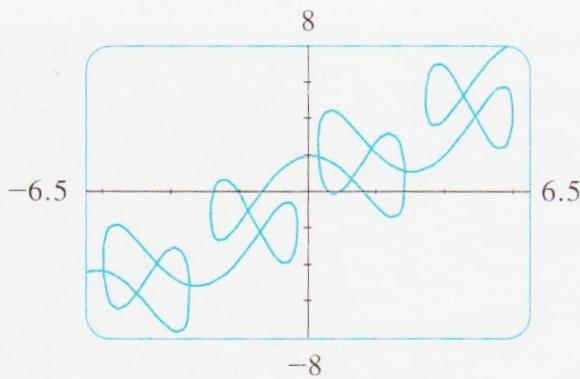

FIGURA 10

$$x = t + 2 \operatorname{sen} 2t \\ y = t + 2 \cos 5t$$

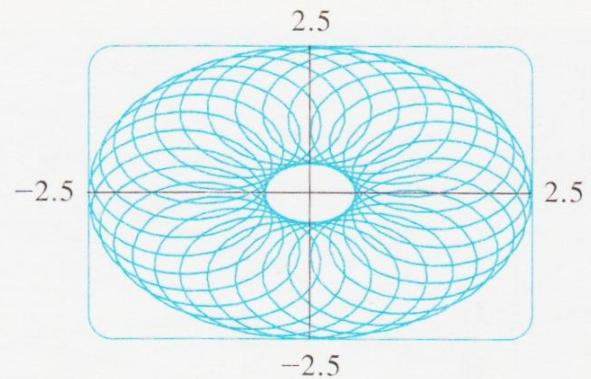

FIGURA 11

$$x = 1.5 \cos t - \cos 30t \\ y = 1.5 \operatorname{sen} t - \operatorname{sen} 30t$$

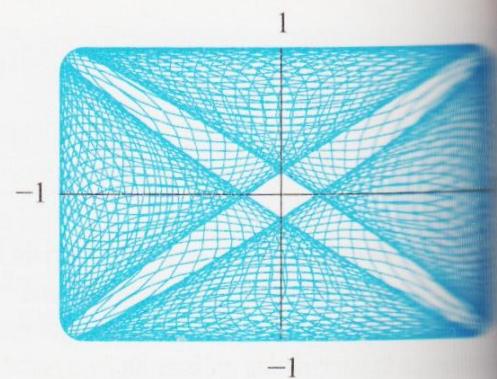

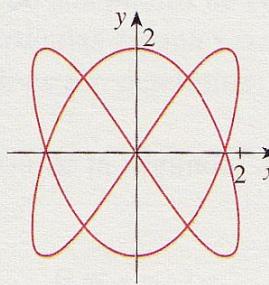

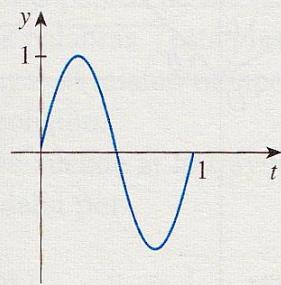

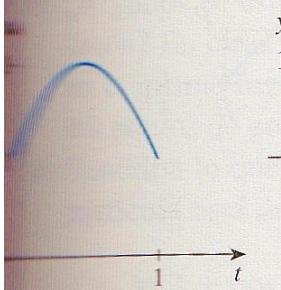

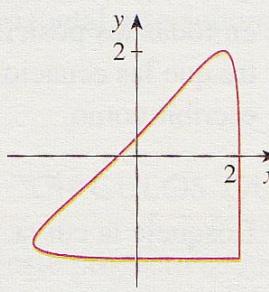

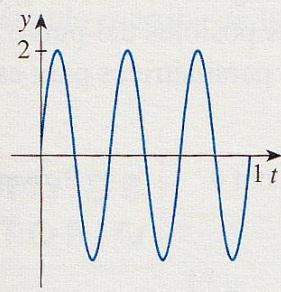

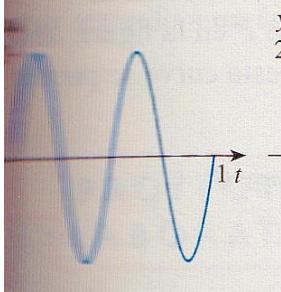

FIGURA 12

$$x = \operatorname{sen}(t + \cos 100t) \\ y = \cos(t + \operatorname{sen} 100t)$$

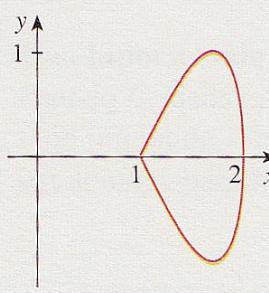

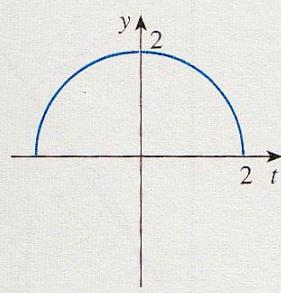

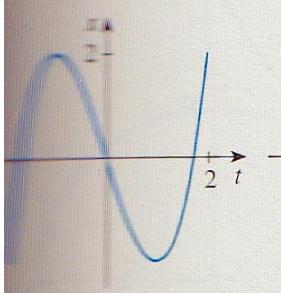

I

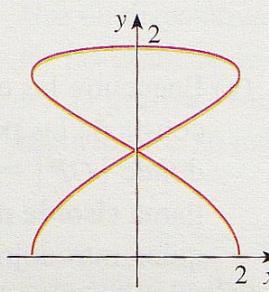

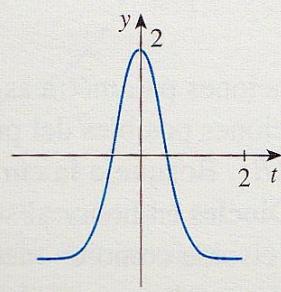

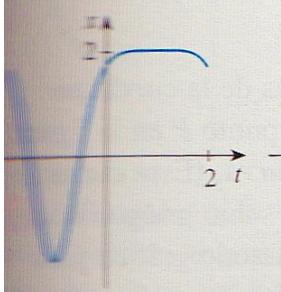

II

III

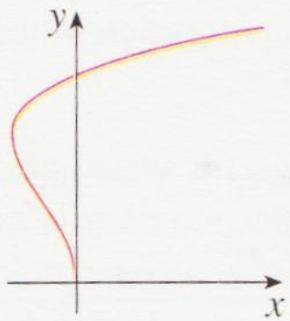

IV

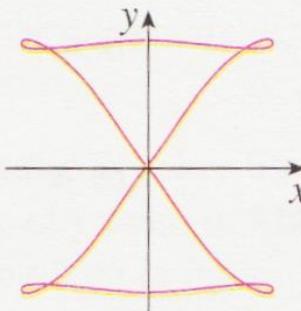

- (a) $x = t^4 - t + 1, \quad y = t^2$
- (b) $x = t^2 - 2t, \quad y = \sqrt{t}$
- (c) $x = \sin 2t, \quad y = \sin(t + \sin 2t)$
- (d) $x = \cos 5t, \quad y = \sin 2t$
- (e) $x = t + \sin 4t, \quad y = t^2 + \cos 3t$
- (f) $x = \frac{\sin 2t}{4 + t^2}, \quad y = \frac{\cos 2t}{4 + t^2}$

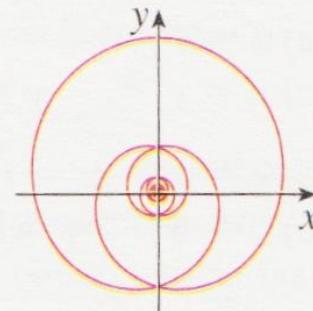

I

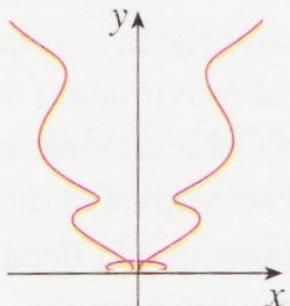

II

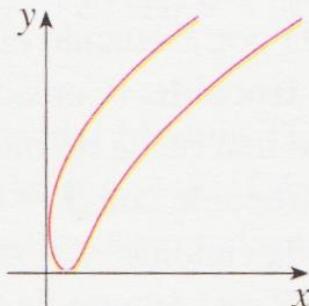

III

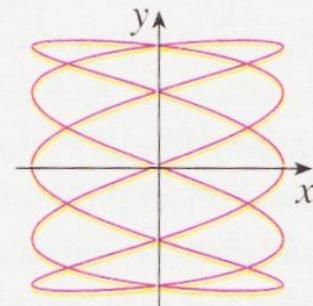

IV

V

VI

$$x = 3 + 2 \cos t, \quad x = 1 + 2 \sin t, \quad \pi/2 \leq t \leq 3\pi/2$$

$$x = 2 \sin t, \quad y = 4 + \cos t, \quad 0 \leq t \leq 3\pi/2$$

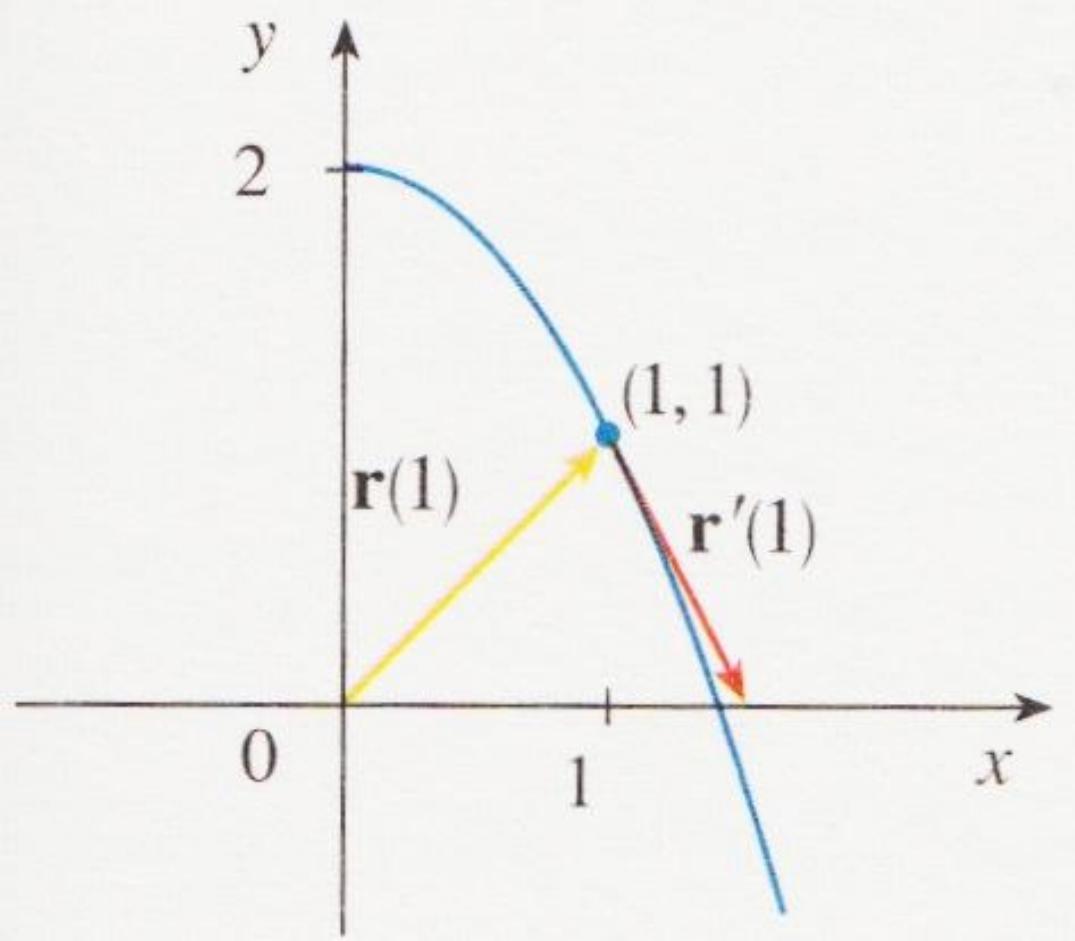

$$x = 5 \sin t, \quad y = 2 \cos t, \quad -\pi \leq t \leq 5\pi$$

$$x = \sin t, \quad y = \cos^2 t, \quad -2\pi \leq t \leq 2\pi$$

Derivadas

2 TEOREMA Si $\mathbf{r}(t) = \langle f(t), g(t), h(t) \rangle = f(t) \mathbf{i} + g(t) \mathbf{j} + h(t) \mathbf{k}$, donde f, g y h son funciones derivables, entonces

$$\mathbf{r}'(t) = \langle f'(t), g'(t), h'(t) \rangle = f'(t) \mathbf{i} + g'(t) \mathbf{j} + h'(t) \mathbf{k}$$

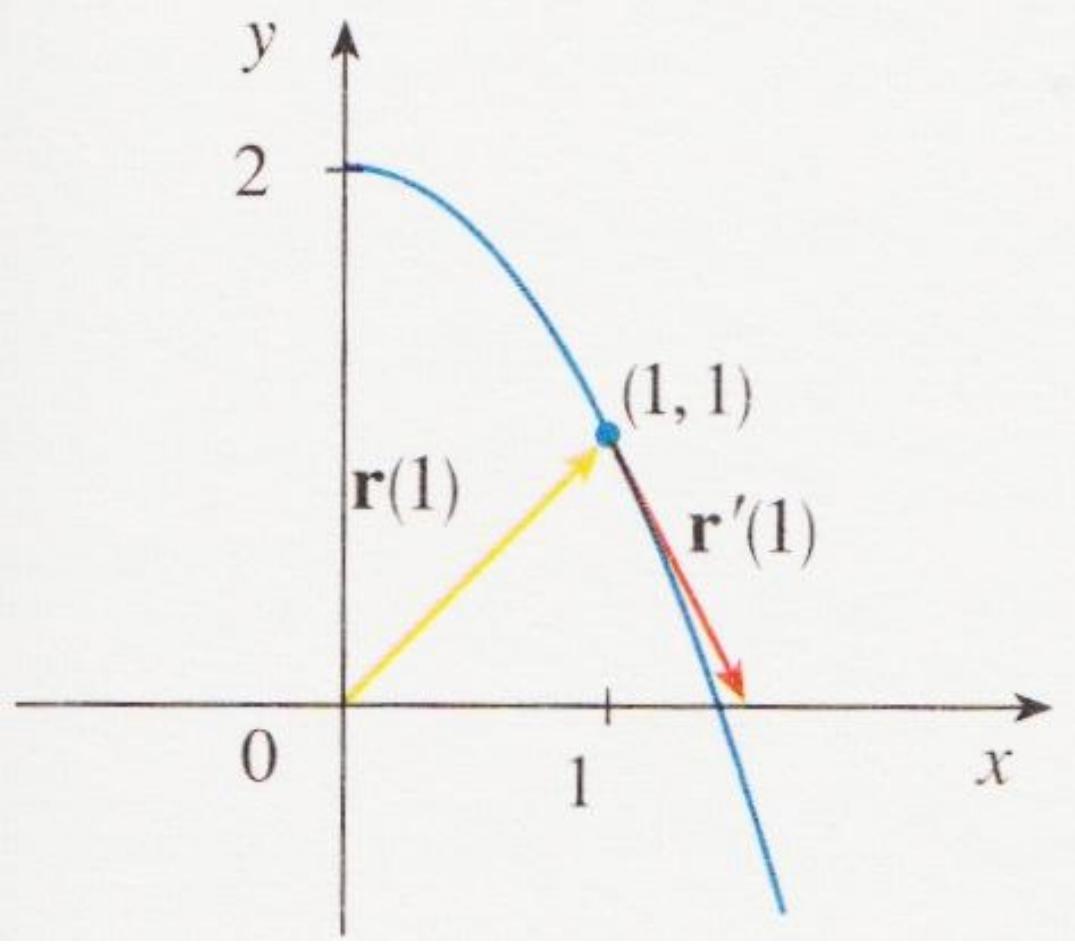

$$\mathbf{r}(t) = \sqrt{t} \mathbf{i} + (2 - t) \mathbf{j}$$

calcule

$$\mathbf{r}'(t)$$

$$\mathbf{r}(1)$$

$$\mathbf{r}'(1)$$

$$\mathbf{r}(t) = \sqrt{t} \mathbf{i} + (2-t) \mathbf{j}$$

calcule

$$\mathbf{r}'(t) = \frac{1}{2\sqrt{t}} \mathbf{i} - \mathbf{j}$$

$$\mathbf{r}(1) = \mathbf{i} + \mathbf{j}$$

$$\mathbf{r}'(1) = \frac{1}{2} \mathbf{i} + \mathbf{j}$$

Vector Normal y Binormal

$\mathbf{r}(t)$

derivando

$\mathbf{r}'(t) \leftarrow$ tangente a la curva trayectoria

unitario

$$\boxed{\mathbf{T}(t) = \frac{\mathbf{r}'(t)}{\|\mathbf{r}'(t)\|}}$$

$$\Rightarrow \mathbf{T}(t) \cdot \mathbf{T}(t) = 1 \rightarrow \frac{d}{dt} \mathbf{T}(t) \cdot \mathbf{T}(t) = 0 \Rightarrow \mathbf{T}'(t) \cdot \mathbf{T}(t) + \mathbf{T}(t) \cdot \mathbf{T}'(t) = 0$$

$$\therefore \mathbf{T}(t) \cdot \mathbf{T}'(t) = 0 \Rightarrow \mathbf{T}'(t) \perp \mathbf{T}(t)$$

defina

$$\boxed{\mathbf{N}(t) = \frac{\mathbf{T}'(t)}{\|\mathbf{T}'(t)\|}} \quad \leftarrow \text{normal unitario principal a la curva trayectoria}$$

tome ahora

$$\boxed{\mathbf{T}(t) \times \mathbf{N}(t) = \mathbf{B}(t)} \quad \leftarrow \text{Binormal}$$

Velocidad y Aceleración

$\mathbf{r}'(t) \leftarrow$ es la velocidad

$$\mathbf{v}(t) \triangleq \mathbf{r}'(t)$$

$\mathbf{a}(t) \triangleq \mathbf{v}'(t) = \mathbf{r}''(t) \leftarrow$ aceleración

la magnitud es la rapidez

$$\|\mathbf{r}'(t)\|$$

INTEGRALES

$$\mathbf{r}(t) = f(t)\mathbf{i} + g(t)\mathbf{j} + h(t)\mathbf{k}$$

$$\int \mathbf{r}(t)dt = \int f(t)dt\mathbf{i} + \int g(t)dt\mathbf{j} + \int h(t)dt\mathbf{k} + \mathbf{C}$$

$$\int\limits_a^b \mathbf{r}(t)dt = \int\limits_a^b f(t)dt\mathbf{i} + \int\limits_a^b g(t)dt\mathbf{j} + \int\limits_a^b h(t)dt\mathbf{k}$$

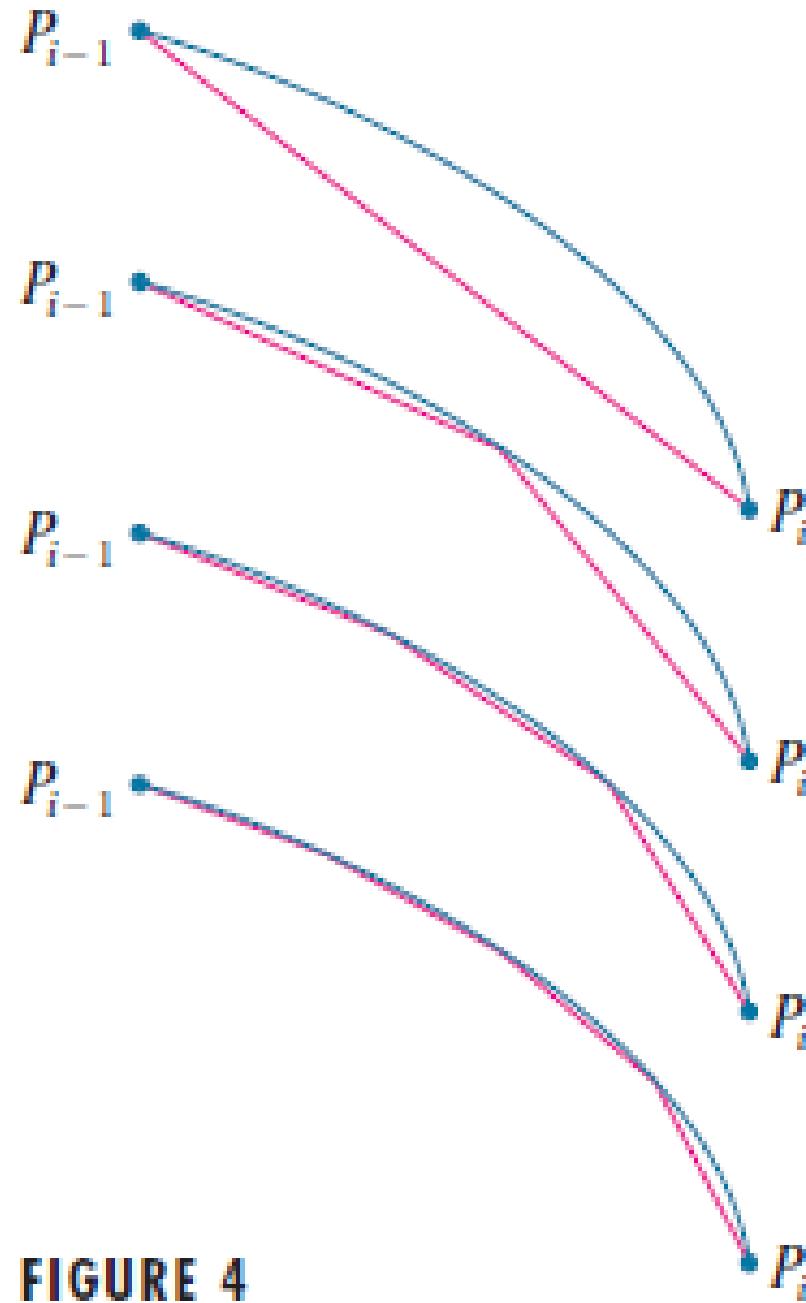

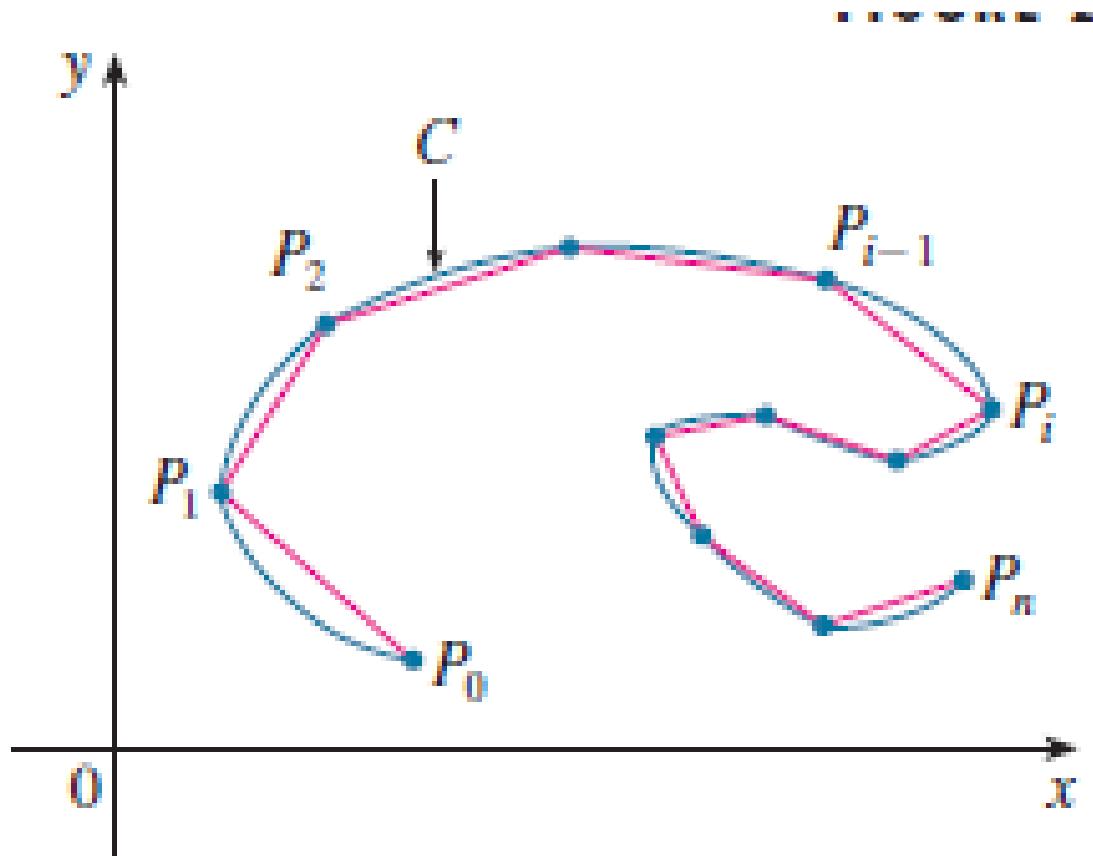

FIGURE 4

Geometría

- Curvatura

$$\kappa \triangleq \frac{\|\mathbf{T}'(t)\|}{\|\mathbf{r}'(t)\|} = \frac{\|\mathbf{T}'(t)\|}{\|\mathbf{v}(t)\|}$$

Geometría y Física

¿Se podrán poner directamente en términos de $\mathbf{r}(t), \mathbf{r}'(t)$ y $\mathbf{r}''(t)$?
¿sumar, restar, multiplicar?

$$\mathbf{v}(t) \bullet \mathbf{a}(t)$$

$$\mathbf{v}(t) \times \mathbf{a}(t)$$

i)

$$\begin{aligned}\mathbf{v}(t) \bullet \mathbf{a}(t) &= \|\mathbf{v}(t)\| \mathbf{T}(t) \bullet \left[\|\mathbf{v}(t)\|' \mathbf{T}(t) + \kappa \|\mathbf{v}(t)\|^2 \mathbf{N}(t) \right] = \\ &= \|\mathbf{v}(t)\| \mathbf{T}(t) \bullet \|\mathbf{v}(t)\|' \mathbf{T}(t) + \|\mathbf{v}(t)\| \mathbf{T}(t) \bullet \kappa \|\mathbf{v}(t)\|^2 \mathbf{N}(t)\end{aligned}$$

pero

$$\mathbf{T}(t) \bullet \mathbf{T}(t) = 1$$

$$\mathbf{T}(t) \bullet \mathbf{N}(t) = 0$$

$$\|\mathbf{v}(t)\| \|\mathbf{v}(t)\|' \stackrel{\textcolor{red}{?}}{=} \mathbf{r}'(t) \bullet \mathbf{r}''(t) \Rightarrow \boxed{\|\mathbf{v}(t)\|' = \frac{\mathbf{r}'(t) \bullet \mathbf{r}''(t)}{\|\mathbf{r}(t)\|}} \leftarrow \boxed{a_T}$$

Geometría y Física

ii)

$$\begin{aligned}\mathbf{v}(t) \times \mathbf{a}(t) &= \|\mathbf{v}(t)\| \mathbf{T}(t) \times [\|\mathbf{v}(t)\|' \mathbf{T}(t) + \|\mathbf{v}(t)\| \mathbf{T}'(t)] = \\ &= \|\mathbf{v}(t)\| \mathbf{T}(t) \times \|\mathbf{v}(t)\|' \mathbf{T}(t) + \|\mathbf{v}(t)\| \mathbf{T}(t) \times \|\mathbf{v}(t)\| \mathbf{T}'(t)\end{aligned}$$

pero

$$\mathbf{C} \times \mathbf{C} = \mathbf{0} \quad \therefore \quad \mathbf{T}(t) \times \mathbf{T}(t) = 0$$

$$\|\mathbf{v}(t)\|^2 \mathbf{T}(t) \times \mathbf{T}'(t) = \mathbf{r}'(t) \times \mathbf{r}''(t)$$

varios datos que sabemos $\mathbf{T}(t) \perp \mathbf{T}'(t)$ y además $\|\mathbf{T}(t)\| = 1$

$$\therefore \|\mathbf{T}(t) \times \mathbf{T}'(t)\| \stackrel{?}{=} \|\mathbf{T}(t)\| \|\mathbf{T}'(t)\| \stackrel{?}{=} \|\mathbf{T}'(t)\|$$

así que tomemos puras magnitudes

$$\|\mathbf{v}(t)\|^2 \|\mathbf{T}(t) \times \mathbf{T}'(t)\| \stackrel{?}{=} \|\mathbf{r}'(t) \times \mathbf{r}''(t)\| \rightarrow \|\mathbf{T}'(t)\| = \frac{\|\mathbf{r}'(t) \times \mathbf{r}''(t)\|}{\|\mathbf{r}'(t)\|^2}$$

y ya podremos escribir la aceleración normal como la buscamos.

Por otro lado, nos permite escribir la curvatura también como

$$\kappa \triangleq \frac{\|\mathbf{T}'(t)\|}{\|\mathbf{r}'(t)\|} = \frac{\|\mathbf{r}'(t) \times \mathbf{r}''(t)\|}{\|\mathbf{r}'(t)\|^3}$$

por lo que fácilmente se obtiene

$$a_N \stackrel{?}{=} \frac{\|\mathbf{r}'(t) \times \mathbf{r}''(t)\|}{\|\mathbf{r}'(t)\|}$$

Curvas

- $r(t)$ es 3D?
- Graficas de x^{**2} y x^{**3}
- Soluciones

Imaginarios

- $i = \sqrt{-1}$ i.e. $i^{**2} = 1$
- Ahora podemos tener $R \times I$
- Cuyos elementos son pares ordenados (a, b)
- Los R los puedo escribir como $(a, 0)$
- Los I los puedo escribir como $(0, b)$

Suma

- $(a,b)+(c,d)=$
- Neutro aditivo?
- Inverso aditivo?
- Como lo obtuve?

Multiplicacion

- $(a,b)(c,d) =$
- Como se le ocurrio?
- Neutro multiplicativo
- $(a,b)(?,??) = (a,b)$
- Como encontrarlo?

Inverso multiplicativo

- $(a,b)(?,?)=(1,0)$
- Como lo encontro?
- Los Reales es un subconjunto de $C=R \times I$ cuyos elementos son $(a,0)$
- Y los I son un subconjunto de C cuyos elementos son $(0,b)$
- Pero los I no es cerrado wrt la multiplicacion

- Por que?
- $(0,b)(0,d) = (-bd, 0) = -bd$
- En particular
- $(0,1)(0,1) = -1$
- Oceano $i=(0,1)$ que significa que $i^{**}2=-1$

- Si b esta en los \mathbb{R} entonces
- $(b,0)(0,1) = (0,b) = ib$
- Por tanto
- $(a,b) = (a,0) + (0,b) = a + ib$

- Y ahora podemos encontrar mas facilmente la division

$$\frac{a+ib}{c+id}$$

con

$$c+id \neq 0$$

$$\frac{a+ib}{c+id} = \frac{a+ib}{c+id} \cdot \frac{c-ib}{c-ib} = \frac{(ac+bd)+i(bc-ad)}{c^2+d^2}$$

$$z, \bar{z}$$

$$\frac{}{z+w} =$$

$$\frac{}{zw}$$

$$\bar{\bar{z}} = z$$

iff

$$z \in \mathbb{R}$$

$$\overline{z}^n = \bar{z}^n$$
